Operational Simplicity

HOTBOARD®

# The New Hotboard Display System

## Helping Infection Control In Hospitals

*Proven and unique, a display system for the safe display of paper within an infection controlled environment*

**The benefits of the Hotboard for Infection Control** - "I just wanted to say that many of the nursing staff have commented on how useful the display board is, in that we are able to easily remove displayed documents from the holder for reading and replace into a covered slot.

The board is easily cleaned and the infection control specialist nurse is very keen to meet with your team to look at the boards available. It is really good to have a display board that is so versatile."

**The Hotboard; so easy to use** - "Mounted on the wall in the Critical Care Unit and the Minor Operations unit, the display boards look very professional and the hospital branding gives a feeling of continuity across the two areas. The boards provide us with the ability to change displays easily with no keys needed"

Quotes from Karen Kinnear: SRN, SCM, RSCN, MSc Research and Practice Development - Senior Clinical Nurse Manager Critical Care and Resuscitation services.
